Family Forest Carbon Program

WEBSITE REPORT · NOVEMBER 2026

Website performance and media review

Following the move of the content management system to its new hosting, we made two improvements to familyforestcarbon.org: changes now publish faster, and the media library's oversized images were brought down to a sensible size. We also reviewed which files the website actually uses.

Nothing about how the site looks or how you edit it has changed. Every page was checked before and after each step.

About 30 s
to publish changes
was about 1 minute, up to 2¼ minutes

73%
smaller image library
360 MB → 98 MB

54 of 54
pages unchanged
checked before and after every step

IN THIS REPORT

1	**Faster publishing** — what changed for editors, and a tip	page 2
2	**Right-sized images** — oversized originals resized	page 2
3	**Media library review** — which files the site uses	page 3
4	**How we kept it safe**, and optional clean-up for FFCP	page 3

1 · FOR EDITORS

Faster publishing

When you click **Deploy Website** in the CMS, the website is rebuilt with your changes. That rebuild now takes about thirty seconds instead of a minute or more.

REBUILD	BEFORE	NOW
Live website (familyforestcarbon.org)	55 s – 2 min 15 s typically about 1 min 10 s	**28 s**
Building the pages themselves	40 s	**7 s**

What changed: to build each page, the site used to fetch every image from the CMS just to check its dimensions, which was most of the waiting. It now gets the dimensions of all images in a single request.

2 · BEHIND THE SCENES

Right-sized images

Many images in the media library were stored at the full resolution of the original photo — up to 5,300 pixels wide and 13.8 MB for a single image. **92 images** were brought to the same standard new uploads already get automatically: at most 2,000 pixels on the longest side, in the modern WebP format.

IMAGES	BEFORE	NOW
The 92 resized images	299 MB	**37 MB**
Largest single image (*Greenbiz23 Ad*)	13.8 MB	**0.5 MB**
All images in the media library	360 MB	**98 MB**
Whole media library (284 files)	730 MB	**460 MB**

Visitors already received images at the size each page shows them; what changes is the original the site prepares them from, which is now a fraction of the size. Nothing in the CMS needs updating — each image is still in the same place, and image quality on screen is unchanged.

TIP FOR EDITORS

Publishing works as before: the *Deploy Website* button, now finishing in about thirty seconds.

Uploads: images are resized automatically when you upload them. For video, linking to YouTube or Vimeo keeps the media library small.

3 · MEDIA LIBRARY

Media library review

We checked every file in the media library against what the live website shows. Because the library is small, **nothing was removed**; the review is here so you know what is there.

MEDIA LIBRARY	FILES	SIZE
Shown on the website, or used by the CMS itself (logo, help images)	111	118 MB
Not used anywhere	91	191 MB
Used only in content blocks no longer attached to any page	22	97 MB
Used only in draft or archived pages	54	54 MB
Thumbnails on YouTube videos (the site shows YouTube's own)	6	3 MB

4 · HOW WE KEPT IT SAFE

- Every replaced image is kept in the CMS backups, so any original can be brought back.
- The resizing was tested on a copy of the CMS first, then on a single image, before the rest.
- After each step the whole website was rebuilt and compared with the version before: all 54 pages came out the same. One tall background image is now requested at a slightly smaller size, by design.

OPTIONAL CLEAN-UP FOR FFCP

1. **Unused PDFs** — 32 PDFs (243 MB) aren't linked from the website, including three copies of the 39 MB *Apps Practice Overview (May 2024)* and several AFF reports. Some may still be linked from old emails, so we left them in place.
2. **Draft and archived content** — 54 files are used only by drafts or archived pages (the CMS has 10 draft and 8 archived pages). Removing them would leave those drafts with missing images; is that content still needed?
3. **Old content blocks** — 83 content blocks left behind by deleted pages are still stored in the CMS and can be tidied up.

A full list of these files is available on request.
